Dear Ma'am,

I am writing to apply for the Full Stack Python Developer position. I am a Full Stack Python Developer with hands-on experience in building scalable backend systems and modern React-based frontends.

Currently, I work as a Python Full Stack Developer at Bridgeon Solutions LLP, where I develop and optimize REST APIs using Django and Django REST Framework, implement secure JWT-based authentication, and improve database performance using PostgreSQL indexing and ORM optimization. On the frontend, I build responsive, production-ready interfaces using React.js, Redux, and Axios.

Key strengths I bring:
- Strong backend development with Python, Django, DRF, and PostgreSQL
- Experience delivering 15+ production-grade REST APIs and optimizing query performance
- Secure authentication and role-based access control using JWT
- Frontend development using React.js with clean, maintainable code
- Practical experience deploying applications using AWS, Vercel, and CI/CD pipelines

I focus on writing clean, scalable code and delivering features that actually improve performance and usability—not just ticking boxes.

I have attached my resume for your review. Thank you for your time and consideration.

Regards,
Muhammed Salman Faris
Full Stack Python Developer
